

PARKING FACILITY OPERATORS

Customized and Efficient Parking Facility Management

Many internationally operating parking facility managers have been using parking facility solutions by SKIDATA around the world for years. They combine high-quality, reliable access and cash register hardware with flexible, highly functional and well scalable software. Internet-based services for centralized monitoring and sales platforms complete the package. SKIDATA technology is always aligned to your needs and focused on the highest level of operator efficiency, profitability and productivity. As an internationally experienced solution provider, we gladly develop an individual concept for your parking facility management.

Using SKIDATA solutions for your parking facility management, you will increase your revenue, lower your costs and have a better overview!

More Movement for Your Parking Facility Management

Get started and gain momentum: With SKIDATA you can develop your parking facility into a consistent winner with skill and agility.

Based on your needs and priorities, we will develop the best solution for you together. Internet tools, e.g. registration of anonymous customers and automatic billing of parking processes, open up new and efficient sales channels. At the same time, this is the basis for overarching mobility and urban solutions, which connect parking with additional services in parking facilities, such as the charging of electric vehicles and parking of bicycles. Flexible tariff models support revenue optimization of the objects you manage.

However, it is important that you remain in total control of your data even when using an open solution.

SKIDATA's parking facility management systems for parking facility operators in various market segments – **together we will walk new paths together!**

The SKIDATA Products for Your Success:

Barriers & Columns

Perfectly controlled car access. The parking barrier gate and ticket column – an unbeatable team.
